Object Oriented Programming

The following code create a cuteGraph object and stores it in NiceGr.

```
NiceGr = cuteGraph()
```

NiceGr objects can be used to prepare plots.

NiceGr.point() can be used to specify a point using:

```
NiceGr.point(x=4, y=5, color='blue')
```

In this example, we want to plot a point with coordinates (4, 5) and the point is blue. Note that the colors are specified using strings.

We can then see the points on the graph using:

```
NiceGr.plotAll()
```

Assignment

Run the code below and plot three different points.

You can try different colors. Here is a list of colors:

- · color="red"
- · color="green"
- color="blue"
- color="yellow"

```
[ ] →1 cell hidden
```

→ Points, lines, rectangles, and text

Plot points

We can plot multiple point by simply repeating the function call with more points:

```
NiceGr.point(x=1, y=2, color='red')
NiceGr.point(x=3, y=4, color='green')
```

Assignment

Plot three additional points.

```
[ ] → 1 cell hidden
```

Plot lines

Our objects can also produce lines and rectangles.

After creating the objects, you can plot a line segment using

```
NiceGr.lineseg(x1=0, y1=4, x2=2, y2=6, color="yellow")
```

This command defines a line from (x1, y1)=(0, 4) to (x2, y2)=(2, 6). The line is yellow.

Assignment

Run the code below.

Try three different lines with different colors.

```
[ ] → 1 cell hidden
```

▼ Plot rectangles

Similarly, we can plot rectangles using:

```
NiceGr.rect(x1=0, y1=0, x2=2, y2=4, color="blue")
```

In this example, we have:

- (x1, y1) = (0, 0) is the lower-left corner of the recrtangle
- (x2, y2) = (2, 4) is the upper-right corner of the rectangle
- the rectangle color is blue.

Assignment

Run the code and plot two more rectangles.

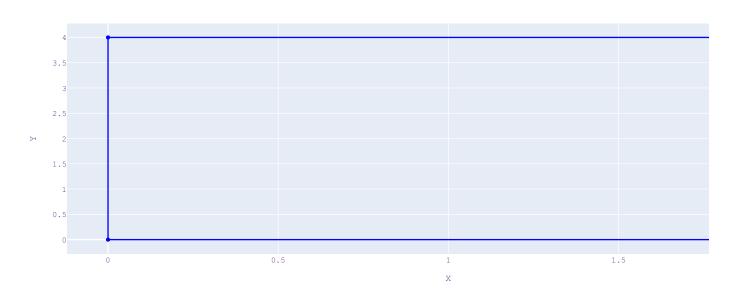

```
# Create the object
NiceGr = cuteGraph()

# Add a rectangle to the graph
NiceGr.rect(x1=0, y1=0, x2=2, y2=4, color="blue")

# Add code for more rectangles

# Show the graph
NiceGr.plotAll()
```

Plots

→ Adding text

We can add text to the graph using strings.

Our strings can span multiple lines as given below:

```
text = """Student Names<br>
Class Name<br>
School Name<br>
Semester Year"""
```

Here, note that
 defines a new line. To place the text centered at the origin, we use:

```
NiceGr.addText(x=0, y=0, text=text, color="black")
```

Assignment

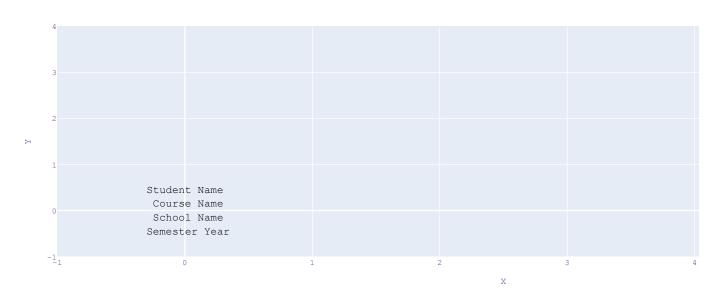

Modify the code to enter your name.

If you cannot see the text, then click on the zoom controls on the upper-right hand corner of the image.

```
# Create the object
NiceGr = cuteGraph()

# Add text:
text = """Student Name<br>
Course Name<br>
School Name<br>
Semester Year"""
NiceGr.addText(x=0, y=0, text=text, color="black")
# Show the graph
NiceGr.plotAll()
```

Advanced drawing examples

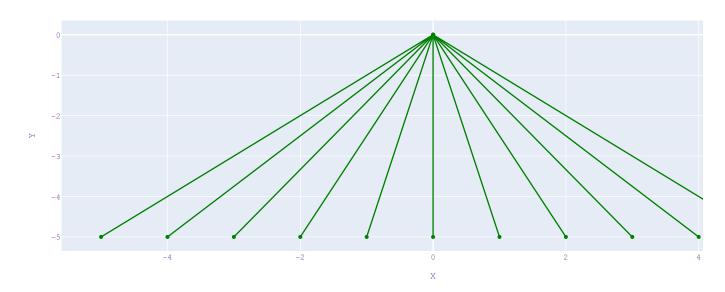

▼ Lines from a given point

Suppose that the ending point is at the origin.

We can just move the x1 using a for loop to get all the lines to connect to the origin.

```
# Create the object
NiceGr = cuteGraph()
# change x1
for x1 in range(-5, +5+1):
   NiceGr.lineseg(x1=x1, y1=-5, x2=0, y2=0, color="green")
# Show the graph
NiceGr.plotAll()
```

▼ Parallel lines

To generate parallel lines, we need to plot lines that have the same slope.

A simple way to do is to add the same dx and dy to every point.

The following example generates parallel line by moving x1:

```
# Parallel lines by varying x1
y1 = 0
dx = 1
dy = 1
for x1 in range(-5, +5+1):
    x2 = x1 + dx
    y2 = y1 + dy
    NiceGr.lineseg(x1=x1, y1=y1, x2=x2, y2=y2, color="green")
```

Assignment

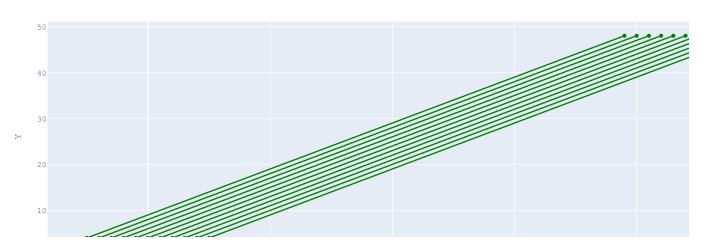

Modify the code to draw parallel lines by varying x1.

```
# Create the object
NiceGr = cuteGraph()

# Parallel lines by varying x1
y1 = 4
dx = 44
dy = 44
for x1 in range(-5, +5+1):
    x2 = x1 + dx
    y2 = y1 + dy
    NiceGr.lineseg(x1=x1, y1=y1, x2=x2, y2=y2, color="green")

# Show the graph
NiceGr.plotAll()
```

→ Generating Videos

▼ Draw a house using line art

To generate a house, we put together the previous examples:

- 1. Build the roof using lines intersecting at a point.
- 2. Use rectangles to build the rest

Assignment

```
# Create the object
NiceGr = cuteGraph()

for x1 in range(-5, +4+1):
   NiceGr.lineseg(x1=x1, y1=6, x2=1, y2=8, color="green")

# Build the house
NiceGr.rect(x1=-5, y1=-8, x2=+2, y2=6, color="red")

# Show the graph
NiceGr.plotAll()
```

Plots

▼ Generate frames using line art

To make videos, we first need to setup a grid for all remaining video frames.

To do this, right after creating the video, we use the prepvideo() function to make all video frames be the same.

Here is an example use:

```
NiceGr = cuteGraph()
NiceGr.prepVideo(minX=-5, minY=-5, maxX=10, maxY=10, magFactor=3)
```

Here, we tell the grid that we have that our house will be plotted approximately within the bounds of (minX, minY) to (maxX, maxY). To make extra space for the names and the frontyard of the house, we make this frame three times larger using magFactor=3.

After we are done plotting each video frame, we save a picture using:

```
NiceGr.plotAll()
NiceGr.saveImage("frame2.png")
```

We will collect these frames to make a video!

Assignment

Feel free to experiment with different designs.

What can you draw?

```
# Create the object
NiceGr = cuteGraph()
NiceGr.prepVideo(minX=-5, minY=-5, maxX=10, maxY=10, magFactor=3)
# Teach line above. Keep as one lesson. Fix the updates.
NiceGr.rect(x1=-2, y1=2, x2=+4, y2=-5, color="red")
# Show the graph
NiceGr.plotAll()
NiceGr.saveImage("frame1.png")
# The door
NiceGr.setwidths(linewidth=3, pointwidth=1)
NiceGr.rect(x1=0, y1=-3, x2=2, y2=-5, color="blue")
# The window
NiceGr.setwidths(linewidth=3, pointwidth=1)
NiceGr.rect(x1=+1, y1=1, x2=3+1, y2=-1+1, color="blue")
NiceGr.plotAll()
NiceGr.saveImage("frame2.png")
# The roof
for x1 in range(-2, +4+1):
 NiceGr.lineseg(x1=x1, y1=2, x2=1, y2=6, color="yellow")
# Show the graph
NiceGr.plotAll()
NiceGr.saveImage("frame3.png")
# Add a front:
y1 = -8
dx = 1
dy = 1
for x1 in range(-5, +10):
 x2 = x1 + dx
 y2 = y1 + dy
 NiceGr.lineseg(x1=x1, y1=y1, x2=x2, y2=y2, color="green")
# Show the graph
```

```
NiceGr.plotAll()
NiceGr.saveImage("frame4.png")
# Add text
text = """Misaugela<br/>9th grade<br/>ECA<br/>2023"""
NiceGr.addText(x=15, y=0, text=text, color="black")
# Show the graph
NiceGr.plotAll()
NiceGr.saveImage("frame5.png")
```

▼ Create a video using generated video frames

We can create a list of all of the video frame images using:

```
file_list = ['frame1.png', 'frame2.png', 'frame3.png', 'frame4.png', 'frame5.png']
```

We need to define a name for our video:

```
video_name = "video2.mp4"
```

To display the video, we simply use:

```
HTML(CreateVideo(video_name, file_list, fps=0.5))
```

Here, note that fps refers to the number of frames per second that we are displaying. At 0.5, it means that there is a delay of half a second between video frames.

Assignment

Try the following:

- 1. Slow down the video display by changing fps.
- 2. Speed up the video display.
- 3. Change the order of the video frames.

```
file_list = ['frame1.png', 'frame2.png', 'frame3.png', 'frame4.png', 'frame5.png']
video_name = "video2.mp4"
HTML(CreateVideo(video_name, file_list, fps=0.5))
Compressed video2.mp4 into temp_video.mp4
```
