### Making Videos with Fraction Objects

The fraction objects can be used to make videos.

After we create the pictures, the following code creates and displays a video.

The video is specified by assigning two variables:

```
video_name = "myvideo.mp4"
my_fps = 1.0
```

The video name defines the name of the video file. This file is stored on your local directory.

The variable my\_fps refers to the number of frames per second that we will display the video. Thus, my\_fps=1 means that the video will be displayed at the rate of one frame every second.

girls

Once the video has been created, the fraction objects have a special function called CreateVideo(video\_name, fps=my\_fps) that creates the video.

To display the video on your browser, we need to pass the video output to the HTML() function as given by:

```
HTML(frac.CreateVideo(video_name, fps=0.5))
```

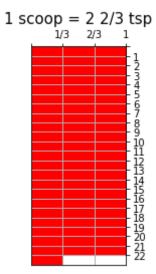

Once the video is created, you can click on it's window to download and save it.

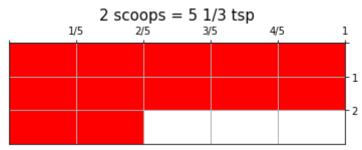

Run the code below to see how it works.

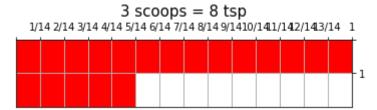

Adjust the number of frames per second to change how the video appears!

```
In [43]: # Video creation demo
    frac = FrV()
    f1 = frac.AddFrac(67,3, comment=" 22 1/3 tsp")
    f2 = frac.AddFrac(12,5, comment="5 1/3 tsp")
    f3 = frac.AddFrac(19,14, comment="8 tsp")

# Create and display the video:
    video_name = "myvideo.mp4"
    my_fps= 2
    HTML(frac.CreateVideo(video_name, fps=my_fps))
```

Compressed myvideo.mp4 into temp\_video.mp4

# Creating a video for multiplication

Fractions can create a video of the multiplication process for you!

We specify the multiplication using:

```
c = "Video of 1/3 * 3"
num = 1 # Numerator
den = 3 # Denominator
mult = 3 # Multiplier
```

Here, c holds a comment.

As before, 1/3 mean the numerator (num) is 1 and the denominator (den) is 3.

We can then add the video frames to our video using:

```
frac.AddMult(num, den, mult, comment=c)
```

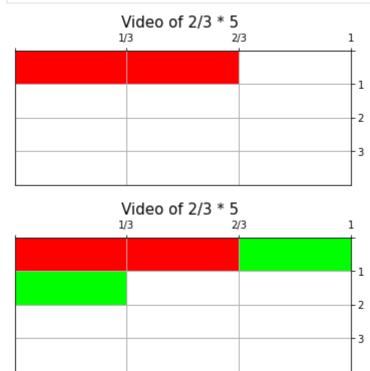

Run the code below to see how it works!

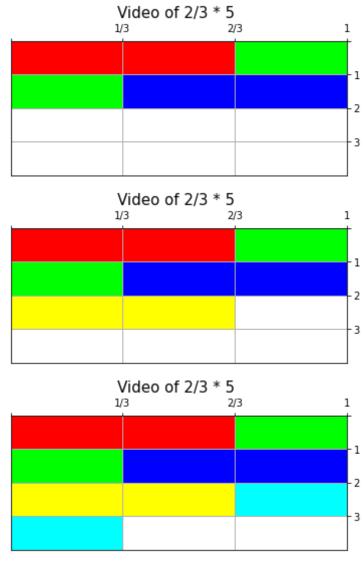

Note that we also have to save and display the video as before.

```
In [49]: # Create the fraction object
    frac = FrV()

    c = "Video of 2/3 * 5 "
    num = 2 # Numerator
    den = 3 # Denominator
    mult = 5 # Multplier

    frac.AddMult(num, den, mult, comment=c)
    # Create and display the video:
    video_name = "video.mp4"
    my_fps = 2
    HTML(frac.CreateVideo(video_name, fps=my_fps))
```

## Adding text to your video

You can add simple text to your video using:

my\_string = "My name is Mario"
frac.addTextFrame(text=my\_string)

3/17/23, 4:56 PM

Run the code below to see how you can add text.

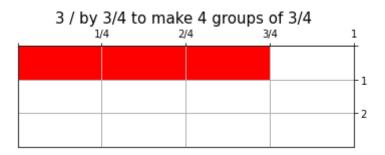

```
In [60]:
         # Create the video object
          frac = FrV()
          # Add the name
         my_string = "A shopper buys one 3 pound bag of cat food each week. How many weeks does one pound last?"
         frac.addTextFrame(text=my_string)
          # Add some more text
         my string = "This visual shows how long a 3 pound bag of cat food lasts"
          frac.addTextFrame(text=my string)
         my string = "This is my assignment. I completed it in class!"
         c = "3 / by 3/4 to make 4 groups of 3/4 "
          num = 3 # Numerator
          den = 4 # Denominator
          mult = 4 #Multplier
          frac.AddMult(num, den, mult, comment=c)
          # Display the video:
         HTML(frac.CreateVideo(video_name, fps=0.25))
```
